

May 2024: From La Palma to Christchurch

It has been a busy semester for me, so I'm just now catching up on this blog. In January, I traveled to La Palma in the Canary Islands to observe for 8 nights using the TNG 3.5 meter telescope. This was my first time observing on one of the large telescopes!

In March, I traveled to Christchurch, New Zealand to present a poster at a conference on Extreme Exoplanet Systems. While there, I went to a dark sky observing session and had a great evening stargazing the Southern skies. I drove to Conway, AR to see the total eclipse on April 8. In May, we were fortunate to see the [Northern lights](#) here in Madison. Our undergraduate student team from UW-Madison continues to observe exoplanet transits.
